

Partnerships & Impact Investments

The strength of our business model is built upon the sum of our partnerships. We bring together the key components that as a sum can achieve the outcomes we aspire to.

We partner with...

SME and Corporate Business...

Businesses big and small are looking to show their green credentials to stakeholders however are also mindful that an unsustainable environment leads to an unsustainable business environment. Investing in projects that support sustainability of the planet are crucial to ongoing business viability.

Farmers...

Stewards of the land; those whose livelihood is built upon the products they can grow and nurture on their land. They have the best interests of their land front and centre in their mind every day.

Plant Nurseries ...

Years of knowledge and the ability to grow the seedlings we require. Nurseries around the world have the resources and experience to help us select, grow, and plant the best species indigenous to the environment to achieve the outcomes we are committed to.

Not for Profits...

We support the NFP sector in two ways. Firstly, we help NFP's raise funds through the sale of EcoForce Trees providing a win win relationship. Secondly, we partner with environmentally conscious organisations and community groups and pay them to plant our trees. These funds support the community and other environmentally important projects of the NFP's.

We're very proud of our Impact Investment Program...

Allocations from the sale of each tree are committed to a growing number of Impact Funds which are annually dispersed to eco-friendly projects in designated countries that align with our tree planting projects and sustainability of the environment. All Impact Fund projects are reviewed against a set of guidelines including specific outcomes to be achieved within certain timeframes.

IMPACT INVESTMENT PROGRAM

Impact Funds are established in a country when tree sales, business turnover and activity in EcoForce Global reaches a pre-defined level.

Examples of projects that could be funded include charcoal cooking and water saving infrastructure for countries in Africa
